THIS ASSIGNMENT is made the 15th day of August 1997

BETWEEN GRAHAM EMERY STEER, Beeches, 60 Cottenham Park Road, Wimbledon, London SW20 0TB, England

(hereinafter called 'the second Inventor') of the one part and
BRISTOL-MYERS SQUIBB COMPANY whose registered office is situated at
Lawrenceville-Princeton Road, Princeton, New Jersey 08543-4000, U.S.A.
(hereinafter called 'the Company') of the other part

- A. W H E R E A S: The second Inventor jointly with Mr. John A. Gent and Mr. Don Highgate has made an invention relating to Adhesive Composition or Structure particulars whereof are set forth in a draft specification which the second Inventor has read and approved and of which an abstract is appended hereto and
- B. The second Inventor undertakes and declares
- (i) that the said draft specification describes the said invention to the best of his knowledge and that he believes that he is a true co-inventor thereof and
 - (ii) that he is not aware of any lawful ground of objection to the grant of letters patent in respect of the said invention.

THIS ASSIGNMENT WITNESSETH as follows:

1. In consideration of the sum of Five Pounds (receipt whereof the second Inventor hereby acknowledges) the second Inventor hereby assigns to the Company the benefit of and all his rights and interests (if any) in the said invention including the right to apply for any Patent, Registered Design or other form of Industrial Property Protection in respect thereof in the United Kingdom and elsewhere throughout the world with or without claim to priority
2. The second Inventor hereby covenants
 - (a) that he will give any consents or permissions and (at the expense of the Company) execute and do all such documents and acts as may be necessary or desirable to enable the Company to make any application for Patent, Registered Design or other form of Industrial Property Protection in the United Kingdom or elsewhere throughout the world in respect of the said invention as the Company may in its sole discretion think fit whether in the name of the Company, by itself or jointly with another or others or, if such be necessary or the Company so desires, in the name of the Inventors or jointly with another or others;

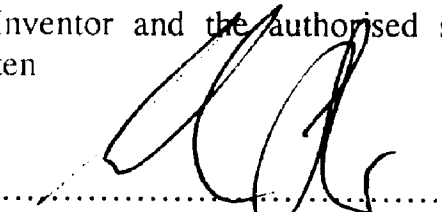

- (b) that in any case where any such application is made in the name of the second Inventor or in the name of the Company or some other person or persons jointly with the Inventor he will, at the request and expense of the Company, execute and do all such documents and acts as may be necessary or desirable to vest such application or any Patent, Registered Design or other Industrial Property Protection that may have been granted pursuant thereto in the Company absolutely;
- (c) that he will not at any time disclose, without the consent of the Company, any confidential information whatsoever concerning the said invention to any person who is not authorised by the Company to receive the same.

3. This Assignment is made without prejudice to any entitlement of the Inventor to be paid compensation pursuant to Sections 40 and 41 of the Patents Act, 1977.

ABSTRACT**ADHESIVE COMPOSITION OR STRUCTURE (FIGS. 6 AND 7)**

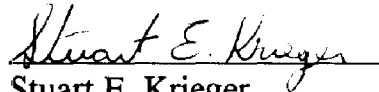

5 An adhesive composition or structure is proposed for use in skin application, e.g. drug delivery wound care, or for attaching devices to collect body waste to the wearer. The composition comprises (a) a polymer or mixture of polymers which act as a pressure-sensitive adhesive present in an amount 20-60 parts by weight of the adhesive composition; and (b) a water-swella-
10 ble polymer present in an amount 20-80 parts by weight of the adhesive composition. The polymer is one which will absorb from 50 to 500 grams of pure water per 100 grams of water-swella-
10 ble polymer.

Additionally there may be present up to 30 parts by weight (of the adhesive composition) of a water-soluble polymer.

15 The water-swella-
ble polymer may be provided as a coating on non-water-soluble and non-water-swella-
ble fibres which limit swelling of the coating to be radial of the fibres. By arranging or aligning the fibres, the direction of swelling of the composition or structure can be controlled. An adhesive ostomy pad is described which expands substantially in only one direction to avoid blocking the
15 stoma aperture.

AFFIDAVIT

I, Stuart E. Krieger, of BRISTOL-MYERS SQUIBB COMPANY, do hereby swear by virtue of my signature below, that the attached is a true copy of the original document and that it is in the possession of BRISTOL-MYERS SQUIBB COMPANY.
