PATENT ASSIGNMENT

This Patent Assignment is delivered pursuant to that certain Asset Purchase Agreement (the "Agreement") effective as of February 7, 2005, between PrairieComm, Inc. ("Assignor") and Freescale Semiconductor, Inc. ("Assignee"). Capitalized terms used but not defined in this Patent Assignment have the same meanings given to them in the Agreement.

The Assignor has delivered this instrument signed by the Assignor to enable the Assignee to file it with any appropriate governmental agency to indicate ownership of Registered Intellectual Property described below and for the other purposes set forth in this instrument. This instrument supplements and is in addition to all other rights of the Assignee under the Agreement and other instruments of transfer delivered in connection with the Agreement.

1. For good and valuable consideration, receipt of which the Assignor acknowledges, and by signing and delivering this instrument, the Assignor sells, assigns, transfers, conveys, and delivers to the Assignee all of the Assignor's right, title, and interest in and to:
 - (a) the patents, patent applications, patent disclosures and invention disclosures specifically listed in Schedule A to this Patent Assignment; and
 - (b) the following properties and rights with respect to all patents and patent applications so listed in Schedule A:
 - (i) the inventions claimed or described in the patents or applications,
 - (ii) any patents in the United States and anywhere else in the world and patent applications that have been or may be granted or filed, respectively, with respect to those inventions, including without limitation all foreign patents that may claim priority based on and correspond to the patents listed in Schedule A,
 - (iii) all divisions, renewals, reissues, continuations, extensions, and (if filed by or for Assignee) continuations-in-part of the foregoing patents,
 - (iv) all income, royalties, damages, and payments due or payable to the Assignor with respect to the patents, including without limitation unpaid damages and payments for past, present, and future infringements of any patent and
 - (v) all rights to sue and recover damages and payments for past, present, and future infringements of any of the patents, including the right to fully and entirely replace the Assignor in all related matters.
2. The foregoing rights in and under the patents shall apply to the full end of their terms as fully as the Assignor would have held the same in the absence of this assignment. As of the date set forth below, the Assignee has succeeded to all right, title, and standing of the Assignor to (a) receive all rights and benefits pertaining to the patents described above, and (b) commence, prosecute, defend and settle all claims and take all actions that the Assignee, in its sole discretion, may elect in relation to the patents and rights described above.

3. This Patent Assignment (a) is irrevocable and effective upon the Assignor's signature to and delivery of a manually signed copy of this instrument or facsimile or email transmission of the signature to this instrument in connection with the execution of the Agreement, if and only if the such execution occurs, (b) benefits and binds the parties to the Agreement and their respective successors and assignees, and (c) does not modify or affect, and is subject to, the provisions of the Agreement.
