# ASSIGNMENT OF APPLICATION

Whereas, I, **Anthony J. O'Lenick, Jr. of Dacula, Ga**, hereafter referred to as *applicant*, have invented certain new and useful improvements in **Functionalized Polymeric Surfactants Based Upon Alkyl Polyglycosides** for which an application for a United States Patent was filed on **August 5, 2004** Application Number **10/914,711**

Whereas, **SurfaTech Corporation of Dacula, Ga** here referred to "assignee" whose mailing address is **2170 Luke Edwards Road Dacula, Ga 30019** is desirous of acquiring the entire right, title and interest in the same;

Now, therefore, in consideration of the sum of two dollars (\$2), the receipt whereof is acknowledge, and other good and valuable consideration, I/We, the applicant(s), by these presents do sell, assign and transfer unto said assignee the full and exclusive right to the said invention in the United States and the entire rights, title and interest in and to any and all Patents which may be granted therefore in the United States Patent to said assignee, of the entire right, title and interest in and to any and all Patents which may be granted therefore in the United States, I/We hereby authorize and request the Director of the U.S. Patent and Trademark Office to issue said United States Patent to said assignee, of the entire right, title, and interest in and to the same, for his sole use and behoof; and for the use and behoof of his legal representatives, to the full end of the term for which said Patent may be granted, as fully and entirely as the same would have been held by me had this assignment and sale not been made.

**Surfactants based upon alkyl polyglycosides**

**Abstract**

The invention relates to a series of polyglycoside derivatives that contain water-soluble groups introduced into the molecule by reaction with the hydroxyl groups present in the starting polyglycoside molecule, with the chloro material. The preferred products have more than one water-soluble group per molecule and are made with mild reagents to avoid discoloration and mal odor. The most preferred products have between 2 and 3 functional groups per molecule.

Dimer amidopropyl dimethyl phospholipids as barrier compounds

**Abstract**

The present invention relates to compounds and, more particularly, to a class of compounds having specific quaternized amine based upon a dimer acid amido amine linked to specific phosphate esters. Dimer acid is a C-36 diacid having a cyclic structure and two amine groups that allow for the synthesis of a high molecular weight material phospholipid composition which is extremely substantitive to human skin and are well tolerated by human tissue making them suitable for use preparation of barrier products for personal care applications.

**Castor amidopropyl dimethyl phospholipids as emulsifiers**

**Abstract**

The present invention relates to novel compounds and, more particularly, to a class of compounds having specific quatenized amine based upon a castor amido amine linked to specific phosphate esters. Castor oil contains predominantly ricinoleic moiefies. This phospholipid is an excellent emulsifier, conditioner and provides foam in formulations. It is also substantitive to human skin and is well tolerated by human tissue making it suitable for use in personal care applications.

Guerbet functionalized phospholipids

**Abstract**

The present invention relates to novel compositions and, more particularly, to a class of compounds having specific quaternized amine based upon a guerbet amido amine linked to specific phosphate esters. Guerbet acids are a specific group of branched acids that have no unsaturation present in the group, but nonetheless are liquid, and are outstanding skin care emollients, providing great spreadability on the skin. In addition this material is not toxic to human skin and is well tolerated by human tissue making it suitable for use in the preparation products for personal care applications.

**Capped nonionic surfactants**

**Abstract**

The invention relates to a series low foaming capped non-ionic surfactants. These compounds by virtue of reacting the terminal hydroxyl group with methallyl chloride, have increased stability in alkali, lower high cloud points and can be reacted via free radical technology into polymer backbones, resulting in non-water blush surfactants.

**Personal care products based upon surfactants based upon alkyl polyglucoside quaternary compounds**

**Abstract**

The present invention relates to personal care products based upon a novel series of polyglucoside quaternary compounds. These materials are surprisingly, extremely effective multi-functional surfactants used in shampoos and body wash products, providing the possibility of making a personal care product with only one surfactant. These unique products provide detergency, foam, conditioning, antimicrobial activity, wetting properties of formulations in a single molecule, and are derived from natural sugar compounds.

**Amphoteric surfactants based upon alkyl polyglucoside**

**Abstract**

The invention relates to a series of polyglycoside derivatives that contain water-soluble groups introduced into the molecule by reaction with the hydroxyl groups present in the starting polyglycoside molecule. The preferred products have more than one water-soluble group per molecule and are made with mild reagents to avoid discoloration and mal odor. The most preferred products have between 2 and 3 functional groups per molecule. The compounds are amino functional and betaine functional alkyl polyglucoside.
