PATENT ASSIGNMENT

This Patent Assignment (this "**Assignment**") effective as of November 15, 2007 (the "**Effective Date**"), is entered into by and between Dana Corporation, a Virginia corporation ("**Assignor**"), and Bosch Rexroth Corporation, a Pennsylvania corporation ("**Assignee**").

WHEREAS, Assignor and Assignee are parties to a certain Asset Purchase Agreement, dated July 6, 2006, as amended (the "**APA**"), concerning Assignee's purchase of certain assets, including the "IP Assets" (as defined in the APA), and assumption of certain liabilities associated therewith; and

WHEREAS, Assignor is the owner of the entire right, title and interest in, to and under those United States and foreign patents and patent applications identified and set forth on Schedule A or that otherwise constitute "IP Assets" under the APA, and any foreign counterparts or equivalents thereto, existing now or in the future and including, but not limited to, patents of utility, improvement or addition, utility model and appearance and industrial design patents and inventors certificates, as well as divisionals, reissues, continuations (in whole or in part), renewals and extensions of any of the foregoing and any patents that may issue from any of the foregoing (all of the foregoing, collectively, the "**Patents**"); and

WHEREAS, Assignee, at its request and direction, wishes to acquire and Assignor wishes to assign all of Assignors' right, title and interest in and to the Patents.

NOW THEREFORE, for good and valuable consideration (including the premises and covenants set forth in the APA), the receipt and sufficiency of which is hereby acknowledged, the parties hereto agree as follows:

Assignor hereby irrevocably sells, assigns, transfers and sets over to Assignee all of Assignor's right, title and interest in and to the Patents, any foreign counterparts or equivalents thereto, existing now or in the future and including but not limited to, patents of utility, improvement or addition, utility model and appearance and industrial design patents and inventors certificates, as well as divisionals, reissues, continuations (in whole or in part), renewals and extensions of any of the foregoing and any patents that may issue from any of the foregoing, and including the subject matter of all claims that may be obtained therefrom, and all inventions, otherwise disclosed therein, along with the right to claim priority to any of the Patents, for Assignee's own use and enjoyment, and for the use and enjoyment of its successors, assigns or other legal representatives, as fully and entirely as the same would have been held and enjoyed by Assignor if this assignment and sale had not been made, together with all income, royalties, damages or payments due or payable as of the Effective Date or thereafter related to any of the foregoing, including, without limitation, all claims for damages by reason of past, present or future infringement or other unauthorized use of the Patents, with the right to sue for and collect the same for Assignee's own use and enjoyment, and for the use and enjoyment of its successors, assigns or other legal representatives.

Assignor authorizes and requests the United State Commissioner of Patents and Trademarks and any other similar government authority to record Assignee as owner of the Patents and issue any and all patents issued thereon to Assignee, as assignee of the entire rights, title and interest in, to and under the same, for the sole use and enjoyment of Assignee and its successors, assigns or other legal representatives.

This Assignment may be executed in one or more counterparts, each of which shall be deemed to be an original, and all of which together shall constitute one and the same instrument.

IN WITNESS WHEREOF, Assignor and Assignee have caused this Assignment to be duly executed as of the date first above written.
