1. In the Patent Assignment, the Assignor affirmatively and effectively assigned to the Assignee all of the Assignor’s right, title and interest in and to the patents and patent applications set forth on Exhibit B to the Contribution Agreement entered into as of April 21, 2006 (the “**Agreement**”) and any and all divisional applications, continuing or continuation-in-part applications, and reissue patents related thereto or based thereon, any and all patents issuing thereon, and any and all foreign patents and patent applications corresponding thereto or relying thereon for its filing or convention date (the “**Patents**”).

The foregoing assignment was made in consideration for the Assignee’s obligations under the Agreement and for other good and valuable consideration, the receipt and sufficiency of which were affirmatively acknowledged and agreed to in the Patent Assignment, by which the Assignor did sell, assign, transfer, convey and deliver to the Assignee all of the Assignor’s right, title, and interest in and to the Patents, including all common law rights therein, applications to register therefor and all claims for damages by reason of past infringements of the Patents with the right to sue for and collect the same for its own use and benefit, and for the use and on behalf of its successors, assigns and other legal representatives.

In accordance with the Patent Assignment and in consideration for the Assignee’s obligations under the Agreement and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Assignor does hereby acknowledge and agree that it has sold, assigned, conveyed and transferred, and by these presents does hereby irrevocably sell, assign, transfer, convey and deliver, to the Assignee all of the Assignor’s right, title and interest in and throughout the world, including, without limitation, in, to and under the issued patents and patent applications set forth in Exhibit B of the Agreement and those patents and patent applications identified below in this Supplemental Assignment, including, without limitation, all reissues, divisionals, revisions, reexaminations, continuations, continuations-in-part, extensions and counterparts (whether foreign or domestic) claiming priority to or based on any of the foregoing items, together with all patents issuing therefrom, all inventions and improvements claimed or described in any of the foregoing, all rights to collect royalties, products and proceeds in connection with any of the foregoing, and all causes of action (whether known or unknown or whether currently pending, filed, or otherwise) and other enforcement rights under, or on account of, any of the Patents and all rights to sue and bring other claims for past, present and future infringement, misappropriation or other violation of any of the foregoing and all rights to recover damages (including attorney’s fees and expenses) or lost profits in connection therewith.

Further, in the Patent Assignment, the Assignor authorized the Commissioner of Patents and Trademarks of the United States of America and the empowered officials of all other governments to issue or transfer all such patents and patent applications to the Assignee, as assignee thereof, or otherwise as the Assignee may direct.
