The invention relates to a system for reducing fuel consumption in vehicles. According to this invention, fuel consumption is reduced by minimizing the aerodynamic resistance generated in the vehicle across the front. The inventive system comprises a rear or stern of the vehicle where a depression is known to form. In a preferred embodiment of the invention, the air is captured using a rubber leading wheel is fixed to the rear part of the vehicle roof over which leads slightly towards the rear end. The air is channelled from the upper part of the forward-moving vehicle and is released at the rear portion stern area, the depression serving as a suction device which facilitates the passage of the air. The matter is oriented towards, but does not adhere to the top of the rear door.
