Assignment

WHEREAS, I Jonathan Taylor, residing at 33A Westcroft Squares, London, W6 0TD, hereinafter referred to as "Assignor" believe that I am the original inventor or an original joint inventor of a claimed invention described in the International (PCT) Patent Application entitled Audio Connector and Circuitry, Attorney Docket No. DAPCT-1902, filed on 4 June 2015 and assigned International Patent Application Number: PCT/CN2015/080823; and

For good and valuable consideration, the receipt and sufficiency of which is acknowledged, Assignor hereby agrees to sell, assign, and transfer unto Cirrus Logic International Semiconductor Ltd., a wholly-owned subsidiary of Cirrus Logic, Inc. organized under and pursuant to the laws of Scotland and having its principal place of business at Westfield House, 26 Westfield Road, Edinburgh EH11 2QB, United Kingdom, the entire right, title, and interest in and to the invention and any and all related intellectual property rights (the "Invention") and in and to all patent applications related to the invention for patents in the United States of America, including but not limited to any and all direct and indirect divisions, continuations, continuations-in-part, and reexaminations of said patent applications and reissues of any resulting patents, and Assignor further authorizes and assigns all rights to Cirrus Logic International Semiconductor Ltd. to apply for patent applications and patents in the United States of America directly in its own name, and to claim priority of the filing date of a patent application for the earliest-filed patent application(s) for the invention. Furthermore, for good and valuable consideration, the receipt of which is acknowledged, Assignor hereby also agrees to sell, assign, and transfer unto Cirrus Logic International Semiconductor Ltd. the entire right, title, and interest in and to the invention and in and to all patent applications related to the invention for all countries and/or regions foreign to the United States of America, including but not limited to all rights under any and all international conventions and treaties in respect of the invention and the applications for patents, utility models, utility patents, design patents, supplementary protection certificates, patent certificates, and all similar protections in all countries foreign to the United States of America, and Assignor further authorizes and assigns all rights to Cirrus Logic International Semiconductor Ltd. to apply for letters patent, patent applications, utility models, utility patents, and patent certificates in all countries and/or regions foreign to the United States directly in its own name, and to claim priority of the filing date of a patent application for the earliest-filed patent application(s) for the invention under the provisions of any and all laws, international conventions, treaties, or otherwise.

Assignor hereby authorizes and request the Commissioner of Patents of the United States of America to issue patents in the United States of America related to the aforesaid International (PCT) Patent Application, and any patent application related to the aforesaid International (PCT) Patent Application in the United States of America, to Cirrus Logic International Semiconductor Ltd., for the sole use and benefit of Cirrus Logic International Semiconductor Ltd., its successors, assigns, and legal representatives, to the full end of the term for which a patent in the United States of America may be granted, the same as they would have been held and enjoyed by Assignor had this assignment not been made.

Assignor also hereby authorizes and request equivalent authorities in foreign countries other than the United States of America to issue patents in those respective foreign countries related to the aforesaid International

(PCT) Patent Application, and any patent application related to the aforesaid International (PCT) Patent Application, to Cirrus Logic International Semiconductor Ltd., for the sole use and benefit of Cirrus Logic International Semiconductor Ltd., its successors, assigns, and legal representatives, to the full end of the term for which the patents in those respective foreign countries may be granted, the same as they would have been held and enjoyed by Assignor had this assignment not been made.

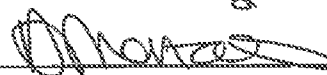

Assignor hereby agrees that, when requested, Assignor will, without charge to Cirrus Logic, Inc. or its subsidiaries, but at its expense, sign all papers, take all rightful oaths, and do all acts which may be necessary, desirable, or convenient for securing and maintaining any and all patent protection (as described above) for the invention in any and all countries and/or regions and for respectively vesting title thereto in Cirrus Logic International Semiconductor Ltd., its successors, assigns, and legal representatives or nominees. To the maximum extent allowed by law, Assignor hereby irrevocably designates and appoints Cirrus Logic International Semiconductor Ltd. and its duly authorized officers and agents, or Cirrus Logic International Semiconductor Ltd.'s applicable designee, as Assignor's agents and attorneys-in-fact to act for and on Assignor's behalf and instead of Assignor to sign all papers, take all rightful oaths, and do all acts described in the foregoing sentence should Assignor refuse or become otherwise unavailable to do so.
