**PATENT ASSIGNMENT**

This PATENT ASSIGNMENT, dated as of December 22, 2016 (this "Patent Assignment"), is made by and between Shire Human Genetic Therapies, Inc., a Delaware corporation (the "Seller") and RaNA Therapeutics, Inc., a Delaware corporation (the "Buyer"). Capitalized terms used but not defined in this Patent Assignment shall have the respective meanings ascribed to them in the Asset Purchase Agreement, dated as of the date hereof, between the Buyer and the Seller (the "Purchase Agreement").

WHEREAS, pursuant to and on the terms and conditions set forth in the Purchase Agreement, the Seller has agreed to assign to the Buyer all of its and the Selling Subsidiaries' right, title and interest in and to (a) all issued patents and pending patent applications identified on Schedule A ("Scheduled Patents"), (b) any patents or patent applications claiming priority to any of the Scheduled Patents, including any continuation, divisional, continuation-in-part, substitution, reissue, renewal, reexamination, supplemental protection certificate, certificate of correction, extension, and foreign counterpart of any such Scheduled Patents, and (c) the right to recover for past, present or future infringement of any of the foregoing (all of the foregoing in clauses (a), (b) and (c), the "Transferred Patent Rights"); and

WHEREAS, the Buyer desires to acquire all such right, title and interest in and to the Transferred Patent Rights.

NOW, THEREFORE, in consideration of the mutual promises set forth in the Purchase Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Seller and the Buyer hereby agree as follows:

1. The Seller hereby assigns to the Buyer, and Buyer hereby accepts, all of the Seller's right, title and interest in and to the Transferred Patent Rights.
2. The Seller agrees to execute all necessary documents and to do all acts reasonably necessary to vest and confirm in the Buyer, its successors and assigns, the legal title to all the Transferred Patent Rights, without further compensation but at the expense of the Buyer or its successors and assigns.
3. The Seller does hereby authorize and request the Commissioner for Patents in the United States Patent and Trademark and the officials of corresponding entities or agencies in any applicable jurisdictions to (a) record and register this Patent Assignment to the Buyer, its successors and assigns, (b) record the Buyer, its successors and assigns as the assignee and owner of the Transferred Patent Rights, and (c) issue any and all patents or certificates of invention that may be granted upon any of the Transferred Patent Rights in the name of Buyer, its successors and assigns, as the assignee to the entire interest therein.

4. Neither the representations and warranties nor the rights, remedies or obligations of the parties under the Purchase Agreement shall be deemed to be enlarged, modified or altered in any way by this Patent Assignment, and the Seller is not making any representations or warranties of any kind whatsoever by virtue of, and shall have no liability under, this Patent Assignment. This Patent Assignment is subject in all respects to the terms and conditions of the Purchase Agreement, and in the event of any conflict between this Patent Assignment and the Purchase Agreement, the terms of the Purchase Agreement shall govern and control.

5. This Patent Assignment and any claims arising hereunder shall be governed by and construed in accordance with the Laws of the State of Delaware, without giving effect to any choice or conflict of Law provision or rule that would cause the application of Laws of any jurisdiction other than those of the State of Delaware. Each of the parties (a) consents to submit itself to the exclusive personal jurisdiction of any state or federal court sitting in the State of Delaware, County of New Castle, in any action or proceeding arising out of or relating to this Patent Assignment, (b) agrees that all claims in respect of such action or proceeding may be heard and determined in any such court, (c) agrees that it shall not attempt to deny or defeat such personal jurisdiction by motion or other request for leave from any such court and (d) agrees not to bring any action or proceeding arising out of or relating to this Patent Assignment in any other court. Each of the parties waives any defense of inconvenient forum to the maintenance of any action or proceeding so brought and waives any bond, surety or other security that might be required of any other party with respect thereto. Either party may make service on the other party by sending or delivering a copy of the process to the party to be served at the address and in the manner provided for the giving of notices in Section 6.1 of the Purchase Agreement. Nothing in this paragraph 5, however, shall affect the right of any party to serve legal process in any other manner permitted by law.

6. This Patent Assignment may be executed in counterparts, each of which shall be deemed an original but both of which together shall be considered one and the same agreement and shall become effective when counterparts have been signed by each of the parties and delivered to the other party, it being understood that both parties need not sign the same counterpart. This Patent Assignment may be executed and delivered by facsimile or .pdf transmission.
