PATENT ASSIGNMENT

THIS PATENT ASSIGNMENT (this "Patent Assignment"), dated as of May 3, 2012, is entered into by and between Seagate Technology International, a company incorporated under the laws of the Cayman Islands ("Assignor"), and Seagate Technology LLC, a limited liability company organized and existing under the laws of the State of Delaware and the United States of America, and having offices at 10200 S. De Anza Blvd, Cupertino, CA 95014 USA ("Assignee").

In consideration of the mutual covenants and agreements contained herein, and intending to be legally bound hereby, the parties agree as follows:

1. Assigned Patents. The term "Assigned Patents" means the issued patents, pending patent applications, and abandoned patent applications listed on Attachment 1 attached hereto.

2. Assignment. For good and valuable consideration, the receipt and adequacy of which is hereby acknowledged, Assignor hereby assigns, transfers, sells and delivers to Assignee all of its right, title and interest throughout the world in and to the Assigned Patents, as well as any reexaminations, extensions, substitutions and reissues of any of the Assigned Patents, and all rights, claims and privileges pertaining to any of the Assigned Patents, including, without limitation, rights to the underlying inventions, the right to claim priority from the aforementioned patents and pending applications, the right to prosecute and maintain any of the Assigned Patents and the right to sue and recover damages for past, present and future infringement or other violation or impairment of any of the Assigned Patents.

3. Further Assurances. Assignor shall use commercially reasonable efforts to perform all reasonable acts, at the request and expense of Assignee, that are necessary, proper or advisable under applicable law or otherwise to permit and assist Assignee in evidencing, perfecting, obtaining and maintaining any rights Assignee has in and to any Assigned Patent. Such actions shall include, without limitation, providing Assignee with pertinent documents and information necessary for Assignee or any of its affiliates, designees or agents to prosecute or maintain any registration or application for any Assigned Patent, or pursue or defend any administrative, court or other legal proceeding involving any Assigned Patent. Assignor represents to the Assignee, its successors and assigns, that Assignor has not and shall not execute any writing or do any act whatsoever conflicting with this Patent Assignment.

4. Successors and Assigns. This Patent Assignment will be binding upon, inure to the benefit of, and be enforceable by, the parties and their respective permitted successors and assigns.

5. Severability. Whenever possible, each provision or portion of any provision of this Patent Assignment shall be interpreted in such manner as to be effective and valid under applicable law, but if any provision or portion of any provision of this

Patent Assignment is held to be invalid, illegal or unenforceable in any respect under any applicable law or rule in any jurisdiction, such invalidity, illegality or unenforceability shall not affect any other provision or portion of any provision in such jurisdiction, and this Patent Assignment shall be reformed, construed and enforced in such jurisdiction as if such invalid, illegal or unenforceable provision or portion of any provision had never been contained herein.

6. Governing Law. This Patent Assignment, and all claims or causes of action (whether in contract or tort) that may be based upon, arise out of or relate to this agreement, shall be governed by, and construed in accordance with, the laws of the State of California, regardless of the laws that might otherwise govern under applicable principles of choice or conflicts of law thereof.

IN WITNESS WHEREOF, Assignor has caused this Patent Assignment to be executed as of the date first written above by the duly authorized officer.
