## [57] ABSTRACT

A boat guide for use in guiding a boat into or out of a boat slip has an elongated upright tubular member with upper and lower end caps, each end cap having a central opening therethrough. An axle is received coaxially within the tubular member and extends through the openings in the end caps, the axle being of external diameter less than the interior diameter of the tubular member providing an annular space between the axle and the tubular member so that the tubular member can deflect relative to the axle to absorb the shock of a boat impact. An upper attachment above the upper end cap and a lower attachment below the lower end cap provide vertical support for the axle, the tubular member and end caps being rotatable relative to the upper and lower attachments.

## [57] ABSTRACT

A boat dock for use to store boat therein, the boat dock including a boat slip having an open entry, opposed sidewalls and a front, a dock guard secured to each dock sidewall at the entry and extending laterally from the sidewall to which it is attached and forwardly of the entry. A first intermediate guard affixed to one of the dock sidewalls and extending a short distance from the sidewall, a second intermediate guard affixed to the other sidewall opposite to the first intermediate guard, the second intermediate guard extending a short distance from the sidewall, the first intermediate guard being adjustable so that the spacing between the first and second intermediate guards is that which is slightly greater than the width of the boat to which the dock is adapted and a pair of padded stop members secured to the dock front and spaced apart and positioned to receive the forward position of the boat bow therebetween and a winch secured to the dock front between the pair of padded stop members, the winch having a retractable flexible member, the outer end of which is attached to the bow of the boat.
