UNITED STATES PATENT APPLICATION ASSIGNMENT AGREEMENT

Dean MASON, residing at 116 Horseman Association Road, Tallahassee, Florida 32304 (the "Assignor") has invented certain new and useful improvements (the "Invention") for which a patent application has been applied for in the United States of America (the "Application"), and bears application number 16/888,058 which was filed with the U.S. Patent & Trademark Office on May 29, 2020, and is entitled SYSTEM AND METHOD FOR A CLUTCH BALANCE PISTON PRESSURE REGULATION SYSTEM.

SUPERIOR TRANSMISSION PARTS, INC., a Florida corporation, located at 3770 Hartsfield Road, Tallahassee, Florida 32303 (the "Assignee"), wishes to acquire the entire right, title, and interest to any United States patent that may be granted for the invention and based upon the Application and the entire right, title, and interest to make, use, and sell the invention within the United States of America and its territorial possessions.

In consideration of \$1.00 (USD) paid to the Assignors, and other good and valuable consideration, which the Assignors acknowledge receipt of, the Assignors assign, sell, and transfer to the Assignee the entire right, title, and interest in the invention and the Application, and in all non-provisional applications for United States patents claiming priority to the Application, such as continuing applications and divisional applications, and in any United States patent and all reissues and extensions thereof that may be granted, together with the right to extend the protection for any resulting United States patent to the various territorial possessions now owned or which may be hereafter acquired by the United States of America, together with all rights of priority granted by local laws and treaties including any international convention, for the protection of industrial property, all rights conveyed herein to be held and enjoyed by the Assignee for its own use and benefit, and for the use and benefit of the Assignee's successors or assigns, to the full end of the term for which any United States patent or industrial property right for the invention are enforceable, as fully and entirely as the same would have been held and enjoyed by the Assignors if this assignment had not been made. The Assignors hereby authorize that any and all United States patents and any and all industrial

property rights, when granted, be issued in accordance with this assignment to the Assignee.

The Assignors further warrant to the Assignee that the Assignors had full and unencumbered title to the Invention and Application at the time this Agreement was made.

The Assignors further agree, without demanding any further consideration, at the request but at the expense of the Assignee, to do all lawful and just acts, including executing and acknowledging instruments, furnishing information, and giving testimony that may be or become necessary for obtaining, sustaining, or reissuing a United States patent, and for maintaining and perfecting the Assignee's right to the invention and any United States patent and industrial property right granted for the invention, such as in cases before the United States Patent and Trademark Office and litigation.

IN TESTIMONY WHEREOF, I have hereunto set my hand and affixed my signature, this ^{20TH} day of MARCH, 2022.

Signed at Tallahassee, FL, USA
city country
